

Strayos + Vantage Point

Closing the gap between plan and performance

Get one connected view of your operation, linking engineering decisions with real-world execution.

Digability Feedback Loop

Connect blast design directly to production performance. Overlay fragmentation analysis with real-time cycle data to understand how blast quality influences loading efficiency.

Optimize future blasts with measurable production outcomes.

Adaptive Haul Road Optimization

Turn road conditions into operational improvements. Combine AI road analysis with live fleet performance to identify where road conditions are impacting production.

Prioritize maintenance where it delivers the greatest operational value.

Real-Time Safety & Compliance

Move from hazard detection to active enforcement. Pair AI hazard detection with real-time geofencing to help keep equipment out of restricted areas.

Improve compliance while reducing operational risk.

From Insight to Impact

12%

Increased Shovel Throughput

From optimized blast-to-loading feedback.

10%

Reduced Fuel Consumption

Through adaptive haul road optimization.

15%

Faster Slowdown Detection

Automatically identify performance losses before they become larger operational issues.

100%

Inventory Reconciliation

Compare theoretical material movement with actual tonnage in the field.

OEM Agnostic
Works across mixed fleets with no vendor lock-in.
