

Plant Problem or Fleet Problem? Now You Can Tell.

Close the last blind spot in the operation. Connect real-time plant data with fleet performance. Built for mining and aggregates operations.

AUTOMATION SERVICES, INC.

PLANT INTELLIGENCE

- Plant Status**
Real-time plant state
- Tons Per Hour**
Track production rate
- Total Tons**
Monitor material processed
- Rock Breaker Usage**
See the impact on haul truck performance

Vantage Point

FLEET PERFORMANCE

- Fleet Performance**
Real-time production performance
- Cycle Times**
Operational cycle visibility
- Equipment Utilization**
See how equipment is being utilized
- Stacking Reason**
Understand why equipment is waiting

Plant status and fleet performance usually live in separate systems. **Now you can see what caused the slowdown in one connected view.**

PLANT + FLEET Know what's behind the slowdown.

When the plant runs out of rock, see how far away the nearest haul truck is, and how long the event lasts.

Understand how material movement is impacting production.

Plant or fleet. Now you can tell.

TPH + CYCLES Connect plant throughput to cycle performance.

Bring TPH and fleet cycle data together to see how changes in haul performance relate to production at the plant.

See how cycle performance changes alongside plant throughput throughout the day.

Connect what's happening in the fleet to what's happening at the plant.

WAITING + REASON Know what's behind the wait.

Connect stacking delays with the operational activity happening at the same time.

Understand how that activity relates to haul truck waiting and performance.

Go beyond "waiting." Understand what's driving it.

From Insight to Impact

ROCK BREAKER IMPACT

See how Rock Breaker utilization impacts individual haul truck performance throughout the day.

BOTTLENECK CONTEXT

Go beyond seeing where a bottleneck exists. Understand why it's happening so your team can address the cause.

SEE THE CONNECTION IN ACTION.
Request a personalized walkthrough.
